

# **November is Alzheimer's Awareness Month**

Isn't it time YOU told all your friends and loved ones about  
*AmazinGrape!*

Alzheimer's Disease is a progressive, degenerative disorder that affects lots of people. Similar to dementia, Alzheimer's attacks neurons in the brain, causing them to die, resulting in loss of memory, declining skills and changes in behavior. Although mostly affecting older people, it is now showing up at much younger ages. Alzheimer's can be treated but there are no drugs to stop the progression.

**We are on a mission to tell people the truth about  
Alzheimer's and tell them there is something really great  
they can share with everyone right now!**

**Researchers now know Muscadine is so nutrient-rich,  
it is changing the view of natural supplements!**

Lots of people are telling us the Muscadine does a great deal to help their focus and clarity. The Muscadine has been shown to help with reducing inflammation, which is the cause of lots of problems, including heart disease, allergies, pain and much more.

The Muscadine may have more vital nutrients and powerful antioxidants than any other fruit or vegetable in the whole world. These nutrients help to feed all the cells in the body, and naturally occurring coumeric acid helps the blood flow more freely, carrying amino acids, minerals and antioxidants to the body as well as the brain.

*AmazinGrape* is produced at the oldest and largest Muscadine Vineyard in North Carolina under the most strict, inspected quality control standards.

Our special, time consuming process (which keeps the enzymes alive) and our proprietary blend of seed and skin give you the finest and purest product available!

**Researchers say the Muscadine has a bona fide physiological effect on the body, and with hundreds of studies going on at major hospitals and research facilities, wouldn't you want all your loved ones to be taking *AmazinGrape* everyday?**
