

AmazinGrape

How does *AmazinGrape* compare with other Grape Seed Supplements?

A year ago there were only a handful of companies selling grape seed, BUT now...

...as more research confirms the benefits of consuming Muscadine Grape Seed and Skin, and now that Dr. Oz and the Susan B. Komen Foundation are talking about how the Muscadine can help in the battle against cancer; there are more companies jumping on board with a grape seed product. (As we predicted 2-3 years ago) **But how do they compare?**

Here are some facts for you to consider and share...

The Muscadine (*vitis rotundifolia*) is the only grape with 20 pairs of chromosomes. All bunch, cluster, table and wine (vinifera) grapes have only 19 pairs. Muscadines are 40 times stronger than vinifera grapes and have 44 times more Resveratrol than wine grapes. That's why the researchers believe the Muscadine has so many more nutrients (estimates are hundreds of phenolic compounds) The Muscadine may have more vital nutrients and powerful antioxidants than any other fruit or vegetable in the whole world!

Our proprietary blend and extensive, careful processing makes the difference!

Our product is produced at the oldest and largest Muscadine vineyard in North Carolina, under very strict guidelines by a Chemist committed to the highest quality product.

The production facility is inspected by the USDA and FDA not once, but twice yearly.

Since they are also a winery, there are ATF agents constantly checking the quality control.

Open a capsule of any other product and one of *AmazinGrape*. Now see and feel the difference.

One is dark brown, grainy and hard (like coffee beans, roasted at high temps, quick to market)

AmazinGrape is soft and deep purple. In order to keep the enzymes alive, the production is very labor-intensive and time-consuming, **but it produces a superior product!**

Most products are vinifera grape seed extract or seed only (less expensive)

High temperatures and alcohol used to make an extract naturally diminish some of the nutrients and destroys some of the enzymes. When a product has 50 mg. of extract,

rice powder or other fillers (ground up stems, roots, leaves, etc.) are used to fill the capsule.

Magnesium stearate is also added to keep the rice powder from caking.

***AmazinGrape* has 650 mg. of Ultra Pure Muscadine Grape Seed and Skin Only!**

AmazinGrape is a whole food product in vegetable capsules with no fillers or additives.

How about Price Comparison?

Some companies offer vinifera grape seed products 'Buy One, get Three Free' which makes the cost only \$5 a bottle. They are selling 50 mg of vinifera grape seed extract. So just to get the 650 mg. you would have to buy 13 bottles at a cost of \$65. You still wouldn't know about their production, quality control, or whether it was even produced in this country. Most health food stores sell 100 mg. of vinifera grape seed extract for \$29.95 with no guarantee.

When you compare how the product was produced, what is in the product, amount of mg. per capsule, extract or whole food, price and shipping; **there really is no comparison...**

***AmazinGrape* is the best quality product on the market at only \$33**
